

FOR IMMEDIATE RELEASE:

**TelePresence Tech Collaborates with Samsung to Launch
Life-Size, Full Height 3D TelePresence**

First Public Demonstration June 17 to 19 at InfoComm 09 in Orlando, Florida

June 10, 2009 – Plano, Texas In collaboration with the Samsung LCD Group, TelePresence Technologies, LLC next week will launch a new patented solution for displaying life-size images of people to their full height in a live transmission. The new system, integrating a Samsung 82-inch LCD monitor, creates the effect of people at distant locations from around the world appearing to be present in the three dimensional setting of the room as they interact naturally with direct eye contact, regardless of whether they're standing up or sitting down. Other telepresence systems restrict meeting participants to seated positions to prevent a portion of the view from being lost when participants stand up.

The first public demonstration of the new TPT4000 Room System will be featured at the TelePresence Pavilion, June 17 through 19, at InfoComm 09 in Orlando, Florida.

Scott Birnbaum, Vice President, LCD Group, Samsung Digital Solutions Business, says "As the world's largest manufacturer of LCDs, we are always seeking innovative, new applications for our products. We see tremendous potential for the integration of our displays with TelePresence Tech solutions, to add highly engaging three-dimensional qualities and interactive life-size appearances to normal teleconferencing."

Ira Weinstein, analyst and partner at Wainhouse Research says, "The TelePresence Tech TPT4000 room system, with an integrated 82" single LCD display, overcomes the seating restrictions of the typical three-screen telepresence systems. After participating in several TPT4000 sessions, I have noted that this solution, and specifically the ability to stand and move around the room during a conference, provides an exceptional sense of presence."

Duffie White, CEO of TelePresence Tech says, "With access to Samsung's leading edge LCD display technology and with the support of their technical experts, the TelePresence Tech solutions have been developed to deliver stunning clarity with vibrant color while having true depth in our telepresence systems."
